**The Lugaia SafeSeal crimp  
in 3 different sizes**

### Simply brilliant or brilliantly simple?

With the new development of the SafeSeal closure, Lugaia Containment Solutions has placed the highest priority on **easy handling, high operational safety, universal applicability and low investment costs.**

The result is a completely redesigned double clip with an axial locking mechanism. The entire closure system consists of a SafeSeal closure, a pressing and a cutting tool.

The SafeSeal closure is manually pulled over the bag and pressed together with a special pressing tool. The crimp can then be separated by means of a cutting tool. The crimp is suitable for the liner types CLS-300 to CLS-1100. The film size is decisive for the closure size.

The SafeSeal closure guarantees **OEB-Level 5** values when used with continuous liner systems and thus forms the spearhead of manual closure systems.

By using the SafeSeal opener (see separate product sheet) the closure can be removed without additional cutting.

### SafeSeal closure - functionality
